PROFESSIONAL EXPERIENCE

Microsoft — Power BI
Aug 2024 – Present

Software Engineer 2 (LV 62)

AI EVALUATION INFRASTRUCTURE · FULL-STACK DEVELOPMENT

- Pioneered AI evaluations for the Power BI Modeling Agent: built its eval harness using LLM and programmatic judges, created the initial scoring and reporting system, and authored the template the team now uses for every Modeling Agent benchmark.
- Designed and built a team-wide eval platform on two internal frameworks covering every AI scenario in Power BI; every partner team is onboarding their scenarios to run evals and report results to leadership. Release gating ships next.
- Evals surfaced material agent defects pre-ship: semantic model resolution failures, low-quality model-improvement recommendations, and broken multi-turn conversation handling.
- Shipped Diagram Layouts for Remote Modeling solo in 2 months, bringing cloud-hosted models to parity with local modeling in Power BI Desktop for ~10,000 monthly users.

Norn
May 2023 – Present

Founder

PRODUCT & FULL-STACK DEVELOPMENT

- Raised $25K through a pre-accelerator and solo-built a quantitative research and portfolio platform covering every S&P 500 constituent plus major indices across 10 years of history — performance analysis, correlation checking, portfolio optimization, automated monitoring, AI-assisted research, and trade tracking.
- Built an MCP server supporting Dynamic Client Registration, letting AI clients connect to Norn's data without manually provisioned credentials.
- Owned the entire stack: a Next.js frontend with Auth0 and SnapTrade brokerage aggregation, backed by a Dockerized Django service with Postgres, Redis, Celery, and Stripe on DigitalOcean at norndata.ai.

Descript
Mar 2023 – Feb 2024

Software Engineer

FRONT-END DEVELOPMENT · GROWTH

- Built the consent flow for AI voice cloning, a launch-blocking dependency for shipping the AI team's newest voice model to users.
- Rebuilt onboarding from a linear flow into a decision tree, letting marketing-campaign traffic skip redundant steps while capturing more profile data for growth targeting.
- Shipped in-app guides for the Learn Descript platform, moving new users to first value without leaving the product.

CodexDF
Apr 2022 – Oct 2022

Lead Software Engineer

FULL-STACK DEVELOPMENT · TECHNICAL LEADERSHIP

- Architected the MVP and led 8 engineers to ship the Alpha release on a 6-month roadmap I defined, giving the C-suite dates they could commit to with customers and investors.
- Ran technical diligence conversations with investors during a $2.5M pre-seed raise and set the technical direction for Beta.

Microsoft — OneNote
Aug 2018 – Apr 2022

Software Engineer 2 (LV 61)

FRONT-END DEVELOPMENT · ACCESSIBILITY

- Built the proof of concept for OneNote Win32 Home, presented to Satya Nadella; it was well received and shaped the initiative leadership ultimately funded.
- Led 3 engineers through ~60 accessibility tasks in a 6-week window to hit a compliance deadline, delivering Windows Text Scaling support in OneNote UWP, and implemented 4 of the 5 major UI components in the OneNote Win32 redesign.

EDUCATION & CERTIFICATION

Morehouse College
Aug 2014 – May 2018

B.S. Physics, Minor in Computer Science · Phi Beta Kappa · Highest GPA in the Physics Class of ’18 · Cumulative GPA 3.78, STEM GPA 3.80

Stanford University
Jan 2017 – Jun 2017

Domestic Exchange · Two quarters of foundational CS coursework (CS106A & CS106B)

Certificate in Quantitative Finance (CQF)
Jun 2022 – Jan 2023

Certified Quantitative Financial Analyst · Passed full coursework

TECHNICAL SKILLS

AI Evaluations | TypeScript / JavaScript | Python | C# | C++ | Next.js | React & React Native | Express | Django | Docker | PostgreSQL | Redis | Nginx & Certbot | Auth0 | Stripe | Product Management
